Answer: A,C,F

5.Refer to the exhibit.The ABC Corporation is changing remote-user authentication from pre-shared keys to certificate-based authentication. For most employee authentication, its group membership (the employees) governs corporate access. Certain management personnel need access to more confidential servers. Access is based on the group and name, such as finance and level_2. When it is time to pilot the new authentication policy, a finance manager is able to access the department-assigned servers but cannot access the restricted servers.
As the network engineer, where would you look for the problem?
A. Check the validity of the identity and root certificate on the PC of the finance manager.
B. Change the Management Certificate to Connection Profile Maps > Rule Priority to a number that is greater than 10.
C. Check if the Management Certificate to Connection Profile Maps > Rules is configured correctly.
D. Check if the Certificate to Connection Profile Maps > Policy is set correctly.
Answer: D

6.When establishing a Cisco AnyConnect SSL VPN tunnel, a system administrator wants to restrict remote home office users to either print to their local printer or send the remaining traffic down the Cisco AnyConnect SSL VPN tunnel (with restricted Internet access).
Choose both a tunnel policy option and an ACL type to accomplish this design goal. (Choose two.)

A. The client and server use the server public key to encrypt the SSL session data.
B. The server creates a separate session key and sends it to the client. The client decrypts the session key by using the server public key.
C. The client and server switch to a DH key exchange to establish a session key.
D. The client generates a random session key, encrypts it with the server public key, and then sends it to the server.
Answer: D

8.Which statement about CRL configuration is correct?
